

Creating a digital system to track gym attendance.

The university gym doesn't have a system to track student attendance, which makes it hard to collect data or figure out when the gym is most crowded. Because of this, students can't see how busy the gym is or keep track of their own time there. It also makes it harder for staff to schedule workers, take care of equipment, and plan improvements. The goal of this project is to create a digital system that records student check ins, tracks gym usage, and gives helpful information to make the gym run better for everyone.
